

Subject: Out of Country Travel

If you plan on taking an extended trip out of the country, please let your school administration and school nurse know. Upon return to school, your child will be checked by the school nurse for TB symptoms. In accordance with CDC recommendations, it is no longer necessary to have a PPD test (TB) after traveling out of country to high risk areas, but it is important that staff is made aware of any such travel so we can be sure your child and the school community remain safe.

If you have any questions, please call your school nurse.
